SIZING TOLERANCES

We strive to provide the best garment fitting possible and guarantee that they are delivered within our standard size/measurement tolerances.

What is size tolerance?

A size tolerance is the allowable limit of variation in a garment measurement. For example, our six tolerance for chest width is 2cm. That means that to the measurement you required in the production, you can have 2cm lower or 2cm higher than what was ordered. This exists in all textile orders due to the fact that we are working with malleable materials that have reactions to the different production processes.

What are CFB tolerances in cm?

Shoulder length: 1.5cm

Chest width: 2cm

Sleeve length: 2cm

Body length: 2cm

Neck width: 1.2cm

Neck depth: 1.2 cm

Cuffs: 1.2 cm

Armhole: 1.5 cm

Ribs/collars: 0.5 cm

Important note: To the tolerance chart stated above, it must be added 50% of the tolerance for ALL products that have any Laundry process on a finished garment as well as ALL products that are manufactured with fabrics made out of twisted yarns.
